California Pediatric Tuberculosis Risk Assessment

- Use this tool to identify asymptomatic **children** for latent TB infection (LTBI) testing.
- **Do not repeat testing** unless there are **new risk factors** since the last test.
  If initial negative screening test occurred prior to 6 months of age, repeat testing should occur at age 6 months or older
- Do not treat for LTBI until active TB disease has been excluded:
  For children with TB symptoms or abnormal chest x-ray consistent with active TB disease, evaluate for active TB disease with a chest x-ray, symptom screen, and if indicated, sputum AFB smears, cultures and nucleic acid amplification testing. A negative tuberculin skin test or interferon gamma release assay does not rule out active TB disease.

LTBI testing is recommended if any of the boxes below are checked.

☐ **Birth, travel, or residence** in a country with an elevated TB rate for at least 1 month
- Includes any country other than the United States, Canada, Australia, New Zealand, or a country in western or northern Europe
- If resources require prioritization within this group, prioritize patients with at least one medical risk for progression (see the California Adult Tuberculosis Risk Assessment User Guide for this list).
- Interferon Gamma Release Assay is preferred over Tuberculin Skin Test for non-U.S.-born persons ≥2 years old

☐ **Immunosuppression,** current or planned
HIV infection, organ transplant recipient, treated with TNF-alpha antagonist (e.g., infliximab, etanercept, others), steroids (equivalent of prednisone ≥2 mg/kg/day, or ≥15 mg/day for ≥2 weeks) or other immunosuppressive medication

☐ **Close contact** to someone with infectious TB disease during lifetime

Treat for LTBI if LTBI test result is positive and active TB disease is ruled out.

☐ **None**; no TB testing is indicated at this time.

INLAND EMPIRE HEALTH PLAN

Sudden Cardiac Arrest (SCA) & Sudden Cardiac Death (SCD) Screening

- SCA and SCD screening should be performed for all children (athlete or not) at the same time as the Pediatric Physical Examination or at a minimum of every 3 years or on entry into middle or junior high school and into high school.
- AAP recommended 4 questions directed toward SCA and SCD detection for which a positive response suggested an increased risk for SCA and SCD

A positive response from the 4 questions below or an abnormal ECG should prompt further investigation that may include referral to a pediatric cardiologist or pediatric electrophysiologist.			
1.	Have you ever fainted, passed out, or had an unexplained seizure suddenly and without warning, especially during exercise or in response to sudden loud noises, such as doorbells, alarm clocks, and ringing telephones?	◯ Yes	◯ No
2.	Have you ever had exercise-related chest pain or shortness of breath?	◯ Yes	◯ No
3.	Has anyone in your immediate family (parents, grandparents, siblings) or other, more distant relatives (aunts, uncles, cousins) died of heart problems or had an unexpected sudden death before age 50? This would include unexpected drownings, unexplained auto crashes in which the relative was driving, or SIDS.	◯ Yes	◯ No
4.	Are you related to anyone with HCM or hypertrophic obstructive cardiomyopathy, Marfan syndrome, ACM, LQTS, short QT syndrome, BrS, or CPVT or anyone younger than 50 years with a pacemaker or implantable defibrillator?	◯ Yes	◯ No

◯ **HIGH** Risk needs prompt further investigation	◯ **LOW** Risk
